The Rube Goldberg Polymer Machine Conclusion

For each machine write a brief description, or make a diagram, showing how the ball moved from point A to point B. Use your own paper. Attach this paper to them.

1. Was it easy to find the different types of polymers to use in the machine? Explain why or why not?

2. Were any machines using the same kind of polymer to move the ball similar to other machines? Explain why this may have happened.

3. What can be done to improve this lab? Please be candid..this is going to help provide a better lab in the future.
