High Impact Teaching is the focus of monthly series led by faculty

The University Council Student Engagement and Success Committee has partnered with the Institute for Teaching and Learning (ITL) to offer a regular series focused on High Impact Teaching (HIT). Faculty from across campus will demonstrate new assignments, techniques and applications that have had a positive impact on their teaching. The College of Health Professions will offer the inaugural workshop on October 17, 2018.

“How to Engage Students for Interprofessional Education with Technology and Simulation”

Michelle Boltz, Dr. Diane Brown and Lori Kidd from the College of Health Professions will describe how to engage interprofessional students in simulation experiences that can prepare them to perform in teams of collaborating professionals. Some simulation learning includes advanced technology, while others use role playing to immerse the students in experiencing real life challenges of community members experiencing poverty. Workshop leaders will share lessons learned and strategies for using these types of teaching pedagogies.
